# We make your house a smart home

- Keep your existing wiring, lights and appliance
- No ripping open the walls
- Invisibly Smart. Like a smart home should be.

## It all starts with this

The foundation of your smart home is laid with our digitalSTROM terminal blocks. These mini-modules house all the chips and logic required to turn an everyday appliance into an intelligent one.

Terminal blocks are small enough to install behind pushbuttons and lights, so they'll be invisible to everyone but your electrician.

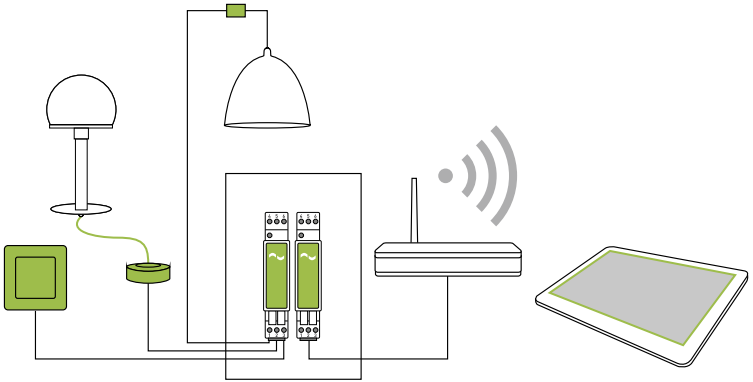

# Teach your home new tricks

Your light switches become multi-purpose controllers, responding to single and multiple clicks, as well as press-and-hold functionality. With a smartphone app you can control everything in your home from anywhere in the world — all with a few simple taps, swipes and voice commands.

digitalSTROM offers you millions of options. It comes already pre-set so you can start right away.

- Single click
- Double click
- Triple click
- Quadruple click
- Press and hold

## Are you ready? Your home is.

Each electric device in your home can be connected with a terminal block allowing you to communicate with other appliances through the already installed electric wires. No additional cabling is required. Anything that draws electrical power can join the smart grid.

With the system in place, individual appliances do more than just receive commands, they can detect the state of other devices and transmit commands of their own in response. They'll even monitor the energy consumption of each appliance.

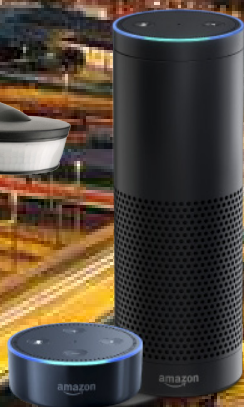

# Scenarios

- Define your scenario easily
- Dim the light, close the curtains and turn on the music with one click
- One click to turn everything off when you're leaving

# Control

- Light switch
- App on your phone and pad
- Motion sensor
- Voice control (amazon echo)

# Energy

- Control your AC with your phone
- Combine your AC, ceiling Fan and Thermostats
- Monitor your energy consumption

# Security

- Smoke and fire detector
- Window and door sensors
- Integrate the doorbell with camera in your home system
- Any switch can be a panic button
- Presence simulation when you're not home
